FERNANDO BRITO

Full Stack Software Developer — .NET / C# | Angular, React & TypeScript | AI-Assisted Development | REST APIs | SQL Server

Aracaju, SE – Brazil (Open to Remote, U.S. Clients) • +55 (79) 9 9915-9885 • fernando.dev.brito@gmail.com •
linkedin.com/in/fernandobrito-dev • github.com/fernandodevbrito

PROFESSIONAL SUMMARY

Full Stack Software Developer with 4+ years of production experience building and maintaining scalable web applications and a nationwide ERP (fiscal, financial, billing, purchasing, inventory), with C#, .NET, ASP.NET Core and Entity Framework Core on the backend and Angular, React and TypeScript on the frontend. Uses AI coding assistants and agentic workflows (Claude Code, Codex, Gemini) daily, and reviews, validates and owns all AI-assisted code. Strong in SQL Server performance tuning, RabbitMQ messaging, REST and third-party integrations, and automated testing (xUnit, TDD). Advanced (C1) English, working independently and in cross-functional Agile/Scrum teams.

TECHNICAL SKILLS

- **AI-Assisted Development:** Claude Code, OpenAI Codex, Gemini, Agentic Development Workflows, Multi-Agent Orchestration, Context Files & Guardrails, AI Code Review, Validation of AI-Generated Code.
- **Frontend:** Angular (v16+, Standalone Components, Signals), React, TypeScript, JavaScript (ES6+), HTML5, CSS3/SCSS, Tailwind CSS, Bootstrap, Reactive Forms, RxJS (Streams & State Management), HTTP Client & Interceptors, Responsive Design & Accessibility (a11y).
- **Languages & Backend:** C#, .NET 10 / .NET 8 / .NET Core, ASP.NET Core (RESTful Web APIs, Minimal APIs), Entity Framework Core, Dapper, Microservices, Clean Architecture, SOLID Principles, Design Patterns, Legacy Modernization (.NET Framework, WebForms), Python, Java (Spring Boot fundamentals).
- **Databases & Caching:** SQL Server (T-SQL, Stored Procedures, Indexing Strategies, Execution Plan Analysis, Query Tuning), PostgreSQL, Redis (In-Memory Caching & Session Management), MySQL/MariaDB, MongoDB, Oracle, Firebird.
- **Testing & Quality:** Automated Testing (xUnit, Moq, TDD), Frontend Testing fundamentals, Linting, Clean Code, Code Review, Secure Coding Practices, JWT & OAuth2 Authentication, Postman, Swagger/OpenAPI.
- **DevOps, Cloud & Messaging:** Docker, CI/CD (Azure DevOps, GitHub Actions), RabbitMQ (Event-Driven Architecture / Asynchronous Messaging), Linux, Git, AWS, Azure.
- **Integrations & Methodologies:** Government Tax Web Services (SEFAZ XML), Banking File Processing (OFX Parsing) & Automated Reconciliation, Webhooks, Agile/Scrum, Kanban, Production Incident Response & Root Cause Analysis.

PROFESSIONAL EXPERIENCE

Software Developer — Full Stack (.NET / Angular / SQL) | DP Sistemas

Aracaju, SE – Brazil • 02/2022 – Present

- **Full-Cycle ERP Development:** Architect, develop, and maintain end-to-end full-stack features for a nationwide enterprise ERP system spanning fiscal, financial, billing, purchasing, and inventory modules, sustaining 99.9%+ availability in production.
- **AI-Driven Legacy Modernization:** Migrating a system from .NET Framework 4 and WebForms to .NET 10 and React with an AI-first workflow, using coding agents across implementation, linting, CI/CD pipelines, code review and documentation; validate and own every change before it ships, and keep production data out of AI tools' reach.
- **Modern Angular SPAs:** Build responsive, reactive Single Page Applications in Angular and TypeScript, implementing modular standalone components, reactive forms with complex validation rules, and RxJS data streams for real-time user feedback.
- **Scalable Web APIs:** Design and scale high-throughput RESTful Web APIs in C# / .NET 8 and ASP.NET Core, incorporating Clean Architecture, dependency injection, and centralized error handling with custom HTTP interceptors on the frontend.
- **Banking Reconciliation & Dashboard:** Built an end-to-end banking reconciliation platform: designed an interactive Angular dashboard for bulk OFX statement uploads and discrepancy review, integrated with decoupled ASP.NET Core services and RabbitMQ queues processing 50,000+ monthly transactions with strict idempotency.
- **Automated Fiscal Integration (SEFAZ):** Developed an automated government tax integration service: built high-performance C#/.NET XML manipulation engines and real-time frontend monitoring status panels, processing 10,000+ electronic invoices (NF-e/NFC-e) per month while ensuring strict regulatory compliance.
- **Database Optimization & Caching:** Spearheaded database query performance tuning and indexing strategies in SQL Server, combined with frontend lazy-loading and response caching (Redis/in-memory), slashing page load times and monthly ledger-closing routines by over 60%.
- **ETL Pipelines & Migration:** Architected resilient ETL migration pipelines using C# and Python that extracted, validated, and consolidated 1,000,000+ records from heterogeneous legacy databases (PostgreSQL, Oracle, MariaDB, Firebird) into SQL Server with 100% referential integrity.
- **Event-Driven Architecture:** Decoupled monolithic ERP workflows into scalable, event-driven background services with RabbitMQ, keeping frontend interfaces fluid and responsive during compute-intensive batch processing.
- **Production Incident Resolution:** Diagnosed and resolved 150+ full-stack production incidents through browser telemetry, application logging, and SQL execution-plan analysis, collaborating directly with QA and product stakeholders in an Agile/Scrum workflow.

Stack: C# • .NET 10 / .NET 8 / .NET Core • ASP.NET Core • Angular • React • TypeScript • JavaScript • SQL Server • T-SQL • PostgreSQL • Redis • RabbitMQ • Docker • Entity Framework Core • Dapper • SEFAZ XML • xUnit • Azure DevOps • Git

SELECTED PROJECTS

Financial Reconciliation & Banking Operations Suite — DP Sistemas

Production

Full Stack ERP Solution · Modern Frontend & Microservices Integration

- Built a decoupled, full-stack financial reconciliation platform featuring a responsive Angular SPA client and an asynchronous ASP.NET Core microservices backend handling 50,000+ financial statement transactions/month.
- Designed interactive ledger reconciliation screens with reactive data grids, custom filters, and batch approval workflows, connected via secure JWT authentication.
- Enforced strict idempotency and transactional integrity across RabbitMQ message queues and SQL Server, verified through an automated xUnit test suite covering core accounting rules.

Stack: Angular • TypeScript • C# • ASP.NET Core • Entity Framework Core • RabbitMQ • SQL Server • Docker • xUnit

Lonerchestrator — Local Multi-Agent Orchestrator for AI Coding Agents

Open Source (MIT)

Agentic Workflow Tool · Built with AI · github.com/fernandodevbrito/lonerchestrator

- Built with AI a local orchestrator where agents split, plan, implement, review and fix work cards on their own, stopping only when a card is approved or needs a human.
- Guardrails enforced by code, not prompts: protected paths, diff size limits, secret detection and deleted-test checks. Nothing merges until CI passes and two independent reviewers approve.
- Python standard library only, with a terminal panel, parallel cards in isolated git worktrees, and one-line installers for Windows, macOS and Linux.

Stack: Python • Claude Code • Antigravity CLI • Git Worktrees • CI • Terminal UI

LocalizeAqui — Multi-Tenant Rental Management Web App (.NET + React)

Client Project · In Development

Full Stack Client Application · Agentic Development Workflow

- Building a modular web application for an event equipment rental client (inventory, reservations, work orders, transport costs) with ASP.NET Core on .NET 10, React, TypeScript and PostgreSQL.
- Developing with Claude Code as a coding agent, directed by a project context file, plans and 13 Architecture Decision Records; nearly 100 tests fail if an endpoint lacks authorization, a business table lacks a tenant ID, or one module references another.

Stack: C# • .NET 10 • ASP.NET Core • Entity Framework Core • React • TypeScript • PostgreSQL • Docker • xUnit • Claude Code

Fiscal Compliance & SEFAZ Invoicing Engine — DP Sistemas

Production

Full Stack Cloud/Enterprise Integration · Government Tax Web Services

- Developed a mission-critical fiscal integration hub with an administrative web interface for continuous monitoring of electronic invoice transmissions, batch status queries, and error resolution.
- Implemented high-throughput XML parsing and digital signature pipelines in .NET Core adhering to Brazilian tax authority (SEFAZ) specifications for 10,000+ invoices/month.

Stack: C# • .NET Core • Angular • TypeScript • SQL Server • XML/XSD Validation • REST APIs • Docker

EDUCATION

- **Technologist Degree (CST), Systems Analysis and Development** — Federal Institute of Sergipe (IFS) | In Progress, expected Dec/2027
- **Technologist Degree, Information Technology Governance** — FANESE | Graduated
- **Technical Degree, Systems Development** — Federal Institute of Sergipe (IFS) | Graduated
- **Technical Degree, Industrial Automation** — SENAI Sergipe | Graduated

CERTIFICATIONS

- **Advanced SQL Server:** T-SQL, Stored Procedures and Performance Tuning
- **Full Stack Web Development & Microservices Architecture:** REST APIs, ASP.NET Core & Modern Frontend
- **Docker for .NET Applications and Cloud Environments**
- **Design Patterns, SOLID Principles, Unit Testing and TDD**

LANGUAGES

- **English:** Advanced (C1) — fluent technical reading, writing, and professional communication
- **Portuguese:** Native
- **Spanish:** Intermediate (B1) — technical reading and professional communication
